

Audit Evidence Tracker

Sample control requests, ownership, status, quality review, and escalation

Purpose

The tracker below demonstrates how a GRC analyst coordinates audit requests, confirms evidence quality, manages due dates, and records reviewer approval.

Evidence Quality Standard

Evidence should identify the control, system, owner, period, population, source, extraction date, and reviewer. Screenshots should include system context and timestamps; reports should be reproducible and protected from editing.

Audit Evidence Tracker

ID	Control	Request	Owner	Period	Status	Quality Check
AE-001	CC6.1	List of active users and assigned roles	IAM	Q2 2026	Accepted	Population and extraction date confirmed
AE-002	CC6.2	Terminated-user samples with disable timestamps	IT Ops	Apr-Jun 2026	Needs Update	Two samples missing HR notification
AE-003	CC7.2	Monthly SIEM alert review evidence	SOC	May 2026	Accepted	Reviewer sign-off present
AE-004	CC7.4	Incident tabletop after-action report	Security	2026	Overdue	Exercise not yet completed
AE-005	CC9.2	Critical-vendor reassessment records	Vendor Mgmt	2026	In Review	One vendor missing residual-risk approval

Status Definitions

Status	Meaning
Requested	Request issued; evidence not yet received
In Review	Evidence received and under quality review
Needs Update	Evidence is incomplete, unclear, or outside the audit period
Accepted	Evidence meets requirements and is retained in the repository
Overdue	Due date passed; escalation required

Audit Readiness Metrics

Sample metrics: 60% accepted, 20% in review, 20% overdue or requiring updates. High-risk overdue items are escalated weekly to the control owner and audit sponsor.
