

Business Continuity & Disaster Recovery Plan

Business impact analysis, recovery objectives, and testing schedule

Program Objective

Maintain critical services during disruption and restore technology in a controlled, prioritized manner. This sample assumes a fictional organization with cloud-hosted business systems.

Business Impact Analysis

Process	Maximum Tolerable Downtime	RTD	RPO	Recovery Strategy
Payroll	24 hours	8 hours	4 hours	Cloud failover; manual emergency payroll procedure
Customer Support	8 hours	4 hours	1 hour	Remote-work routing and backup telephony
Finance Reporting	72 hours	24 hours	8 hours	Restore finance application and reporting database
Identity Services	4 hours	2 hours	15 minutes	Secondary domain controller and break-glass accounts

Continuity Strategies

Remote-work activation; alternate communications; prioritized staffing; manual workarounds; vendor escalation; emergency purchasing; backup connectivity; and executive crisis governance.

Disaster Recovery Sequence

Order	System	Validation
1	Identity, DNS, and core network	Users authenticate; name resolution and routing pass tests
2	Security monitoring and endpoint controls	Logs arrive; EDR policies active
3	Payroll and finance systems	Sample transactions reconcile
4	Collaboration and support systems	Users can communicate and customer queues are available

Testing Schedule

Exercise	Frequency	Evidence
Backup restore test	Quarterly	Restore log, screenshots, checksum, owner approval
Tabletop exercise	Annually	Scenario, attendance, decisions, after-action report
Failover test	Annually	Failover timestamps, service validation, rollback results
Contact-tree test	Semiannually	Response rate and corrected contact list
