

Security Policy Library

Acceptable Use, Password and Authentication, and Access Control policies

Policy Library Overview

These sample policies establish minimum security requirements for workforce technology use, authentication, and access control. Each policy should be approved annually and supported by procedures and technical standards.

1. Acceptable Use Policy

Purpose: Protect organizational systems and information from misuse. Users must use approved devices and services, protect confidential information, report suspected incidents, and avoid unauthorized software, credential sharing, illegal activity, harassment, or attempts to bypass security controls.

Monitoring: The organization may monitor systems consistent with law and policy. Violations may result in access restriction or disciplinary action.

2. Password and Authentication Policy

Passwords must be at least 14 characters where supported; default and shared passwords are prohibited; MFA is required for remote, privileged, and sensitive-system access; password managers are approved; compromised credentials must be changed immediately; and service-account secrets must be vaulted and rotated.

3. Access Control Policy

Access must follow least privilege, role-based access, manager approval, unique identification, and segregation of duties. Joiner, mover, and leaver events must be processed promptly. Privileged access requires separate accounts, MFA, logging, and quarterly review.

Control Requirements

Requirement	Owner	Evidence
Annual policy review	GRC	Approved policy and review record
MFA enforcement	IAM	Configuration export and exception list
Quarterly access review	Application Owner	Certification results and remediation tickets
Termination access removal	HR + IT	HR notification and deprovisioning timestamp
Privileged activity monitoring	Security	PAM/SIEM logs and alert records

Exceptions

Exceptions require documented business justification, risk assessment, compensating controls, approval by the control owner, and an expiration date. Exceptions must be reviewed before renewal.
